

## DT

Our curriculum is a 'theme based approach' starting with a question, which enables the children to learn about an area of interest through a variety of subjects encouraging curiosity and exploration. This helps the pupils to make links between different areas of learning and provides opportunities for them to apply their basic maths, literacy and ICT skills through other subjects. Design and technology is an inspiring, rigorous and practical subject. Using creativity and imagination, pupils design and make products that solve real and relevant problems within a variety of contexts, linking where possible to our topics, considering their own and others' needs, wants and values.

Through the evaluation of past and present design and technology, they develop a critical understanding of its impact on daily life and the wider world. As part of their work with food, pupils are taught how to cook and apply the principles of nutrition and healthy eating linking to our healthy schools work.
