

Science Curriculum Statement

Our aim is to develop our children into independent thinkers who can ask pertinent questions to help build a body of knowledge, which will foster a love of Science.

The children, at Hayes Meadow Primary School, will take part in scientific investigations and experiments as a means of practically testing and growing their subject knowledge. The Science experiences are designed to engage your child in an active and creative learning journey.

Children's skills of enquiry are developed through research, investigation, experiment, first-hand experience and sometimes field trips out of school. We provide learning opportunities/activities that are relevant and connect to your child's prior knowledge and experience.

The Scientific enquiry objectives underpin Biology, Chemistry and Physics, which are focused on developing confidence and interest in scientific knowledge.
